

LabTech

Backup and Storage

Regardless of the types of business you provide IT services to or the size or complexity of the systems you manage, LabTech Backup and Storage can deliver the capability and functionality you need to protect Windows® or Linux servers, workstations and laptops, or virtual environments. From on premise image backups for standalone machines to High Availability (HA) offsite image backups, LabTech Backup and Storage solution provides a selection of comprehensive products that protect operating systems, applications, configurations, settings, and data.

To deliver our partners this a wide selection of dependable backup and storage options, LabTech Software has collaborated closely with best-in-class IT backup and storage and data recovery providers with extensive product lines that offer an array of features and functionalities. Through these integrations, the LabTech Backup and Storage solution can provide data protection and recovery from physical, virtual machines, and cloud. Whether Windows or Linux, we've got you covered!

Computer Associates Technologies (CA)

CA Technologies is an IT management software and solutions company with a deep expertise across all IT environments – from mainframe and distributed, to virtual and cloud. For more than 30 years, CA Technologies has provided businesses the ability and expertise to optimize their technologies by simplifying the complexities of diverse, continually changing IT environments.

Features and Benefits

- Graphical insight into your backup environment to monitor the status of all backup activities, find the nodes that are taking the longest, locate backed up data, discover if data is encrypted and ready for disaster recovery and tracks volume, disk and memory usage on each of your production servers
- Protection without affecting customers' networks performance,

while offering business-grade management control.

- Restore individual Active Directory objects from a system state backup without having to reboot the Active Directory domain controller. Single system state backup allows for both object level and system level restore saving time.
- Easy-to-read network diagram view of the entire environment including all of the servers, storage and other devices showing how they relate to each other and to the CA ARCserve Backup media server(s). Easy drill down on each component offers status, backup methodology and other key information.
- Browse and back up replicated data, restore data to the production or replication server, create synthetic

full backups, view CA ARCserve Replication and HA reports and launch the CA ARCserve Replication and HA graphical user interface (GUI) from within the CA ARCserve Backup GUI.

- Protect the Windows operating system, system state, application and data through physical to virtual and virtual to virtual replication and failover to a Microsoft Hyper-V replica server.

Doyenz

Built for VMware ESX virtualized environments, Doyenz rCloud® addresses the shortcomings of existing business continuity and disaster recovery solutions for SMBs. rCloud leverages ESX virtual machine snapshots to take both full and incremental backups of virtual machines for enterprise-grade recovery of production environments. Among its many benefits you get:

Features and Benefits

- Virtual failover in the cloud in minutes instead of hours or days. With the rCloud Virtual Lab, you can prevent downtime and proactively prepare for disasters before they strike.
- Online Portal: Allows you to verify the status of your server backups, agents and production servers.

- Server Replication: Replicate physical and virtual Windows production server environments daily to the cloud, including the operating system, applications and data.
- Bandwidth Throttling: You're in control of the amount of bandwidth you use with Doyenz. Set-up the bandwidth so it doesn't interfere with your client's productivity.
- Fast Recovery: Decrease your recovery time objectives (RTO) by seamlessly restoring your client's entire server environment in the cloud.

StorageCraft

StorageCraft Technology Corporation is a premier software company focused on helping you backup fast and recover faster. StorageCraft develops innovative disk-based backup, disaster recovery, system migration and data protection solutions for servers, desktops and laptops

Designed for SMB, ShadowProtect® Small Business Server™ will provide following:

Features and Benefits

- Quickly check the backup status for all managed systems from a central location. Gain visibility into the entire image backup process from a single dashboard.

- Monitor backup status in real-time, for immediate response to alerts minimizing the risk of data loss.
- Create, edit or modify a current of backup job for any device, across multiple sites, from a centralized management screen.
- Perform automatic full and incremental backups of SQL, Exchange and other critical applications. Disable, enable, create, edit, delete or cancel backup jobs on demand.
- Deploy the ShadowProtect Backup agent remotely without having to visit machines in distant locations.
